Please amend claim 9 as follows to correct a typographical error:

—9. (Amended) In an RF communications network having a communication channel, an access point and a portable data collection terminal, wherein the portable data collection terminal having a transceiver which may be selectively powered up or down to conserve energy, a method used by the portable data collection terminal for gaining access to the communication network, comprising the steps:

- (a) powering up the transceiver;
- (b) sensing the communication channel for a first predetermined time;
- (c) if during the sensing of the communication channel the channel remained clear, transmitting to the access point; and
- (d) If during the sensing of the communication channel the channel did not remain clear, waiting for a second predetermined time, and branching to step (b).—
